Github

Advanced Features
/ Quality / UX

A

Project grade "A" = high quality B+C+D requirements +
(A-1) site must be PUBLISHED with all use cases working (with live DB)
(A-2) some form of CI/CD
ideally plus: some advanced technical / case study feature(s)

(A-2) Some form of CI/CD
demonstrated

(A-1) Published Working DB

- File upload / Logging / API
- 2-factor authentication
- and/or negotiate with Matt

B

- sophisticated use cases

- Form-filling
- DB testing
- what users cannot do

- Issues
- Branches
- Releases & Versions

- tidy and professional looking
- easy to use
- consistent look and feel

C

- every entity multiple Fixtures
- fixtures for related entities
- protected CRUD roles
- roles for CS actors
- at least 3 non-ADMIN/USER roles
- good range of use cases
- user can CRUD related entities

- Login test for ROLES
- meaningful use cases

- commits over WEEKs
- useful commit messages

- easy to use
- Navbar for logged in role

FAIL
deal
breakers

no related entities
little/few fixtures

simple CRUD
no/few useful case study use cases

little / no automated
testing

○ Project folder contents
(not ZIP. no parent etc.)

core from
provided
starter
project

- ✓ CRUD Users
- ✓ DBFixtures: User
- ✓ Factory package

- ✓ ADMIN New Hashed Passwords
- ✓ ADMIN User CRUD - Hashed Password
- ✓ Log-in protect CS ROLE use cases
- ✓ Fixtures Hashed Passwords

a starter Symfony project has been provided with basic security features for you
- so no marks are awarded for features from the starter project ...

- good naming for all classes/templates

COMMENTS

Note:

please take fixtures and testing seriously !
you MUST do more than create entities and generate CRUD
your entities must be RELATED appropriately for your case study
your project must allow user to complete meaningful use cases
